SUMMARY

Senior iOS Developer with 8+ years of experience building production Swift, SwiftUI, and UIKit applications, with 10+ applications shipped to the App Store. End-to-end owner and developer of the complete iOS implementation of PackageX Vision SDK—an AI-capable scanning SDK powered by offline Tensor-based and Core ML models and deployed across 40+ countries. Shaped its product capabilities and architecture, built every iOS feature, guided corresponding Android implementations, developed Flutter and React Native wrappers, and managed SDK packaging and releases. Experienced in on-device AI, OCR, computer vision, camera systems, model optimization, and modular SDK engineering. Led teams of 2–6 engineers and delivered applications across logistics, real-time communication, sports, language learning, news, utilities, and entertainment.

EXPERIENCE

PackageX

Oct 2021 – Present

Senior iOS Developer · Lahore, Pakistan

- Owned the complete iOS implementation of **PackageX Vision SDK** from product definition and architecture through development, integration, distribution, and release. Personally designed and developed all iOS features and capabilities while helping shape the SDK's product direction.
- Built Vision SDK as an **AI-capable, offline-first scanning platform** that executes Tensor-based and Core ML models directly on the device, enabling intelligent image processing without depending on cloud inference.
- Implemented the SDK's on-device OCR, image analysis, visual recognition, structured field extraction, price-tag scanning, document and label processing, and QR and barcode scanning capabilities.
- Replaced a cloud-based AI pipeline with optimized on-device inference, reducing image-to-response time from **7+ seconds to approximately 200 milliseconds** for the same input image.
- Delivered approximately **95% extraction accuracy** for recognized text and correct field population, transforming camera input into structured information for downstream application workflows.
- Optimized AI model execution, image-processing workloads, memory usage, camera performance, and energy consumption to support reliable operation across different device generations; reduced reported camera-related crashes to **zero**.
- Guided the Android team on architecture, feature behavior, AI processing workflows, and corresponding implementations to maintain consistent capabilities across the iOS and Android SDKs.
- Extended Vision SDK to cross-platform applications by developing and maintaining its **Flutter and React Native wrappers**.
- Designed integration interfaces for client and internal applications and owned SDK packaging, versioning, distribution, and releases through **Swift Package Manager, CocoaPods, and XCFramework**.
- Led iOS development of **Mailroom by PackageX** and **PackageX Receive**, integrating Vision SDK's offline AI and OCR capabilities into package receiving, recipient matching, tracking, notification, and pickup workflows.
- Built these applications using SwiftUI, protocol-oriented design, Combine, and UIKit integration, with Firebase, deep linking, and push notifications.
- Automated release workflows supporting multiple releases per week and owned debugging, testing, code signing, and delivery across the iOS portfolio.
- Mentored and onboarded 2–3 iOS engineers through technical guidance, debugging support, and code reviews; led requirements and solution design with clients and cross-functional stakeholders.

SixLogics / SportCC

Mar 2018 – Oct 2021

Senior iOS Developer

- Developed or revamped 27+ iOS projects spanning full-scale prototypes, internal applications, and product rebuilds with new backends, UI, and user flows; approximately 6–7 were published on the App Store.
- Led teams of 2–6 people, trained new resources, and partnered with clients on requirements, technical solutions, and delivery.

SixLogics / SportCC continued

- Linguitive: Contributed to a language-learning app aimed at tourists, featuring downloadable language packs and interactive learning experiences for practical, everyday phrases across multiple languages.
- **NEEO Messenger with Translator:** Developed and owned the complete chat component and push-notification module, including extensive CallKit integration and offline message handling for reliable communication across changing network conditions.
- Betway Scores: Sole iOS developer for two years, implementing live sports scoring, news, and push notifications.
- Player Match: Primary developer for a sports social platform with role-specific login, video feeds, chat, multi-sport scoring, and local league and match management.
- Owned Fan Challenge and Sport Score App from architecture through release; built Park4U with integrated payments and a custom interface.

Ecom Planners

Nov 2017 – Feb 2018

iOS Developer

- Built and maintained UIKit and Objective-C iPad applications; handled debugging, performance tuning, and build delivery.

OneByte LLC

Jul 2017 – Sep 2017

iOS Intern

- Contributed to iOS application design and implementation using UIKit and Objective-C.

CORE SKILLS

Languages & UI: Swift, Objective-C, iOS SDK, Foundation, SwiftUI, UIKit, SwiftUI–UIKit integration, Auto Layout, accessibility, localization

Concurrency & Architecture: Swift 6 concurrency, async/await, actors, Combine, protocol-oriented programming, MVVM, VIPER, Clean Architecture, modular architecture, dependency injection, Coordinator pattern, SOLID

SDK & AI: Offline AI model integration, Tensor-based models, Core ML, Vision, on-device inference, on-device OCR, computer vision, image processing, structured data extraction, visual recognition, AI model optimization, Vision SDK architecture and development, QR/barcode and price-tag scanning, Flutter and React Native SDK wrappers, Swift Package Manager, CocoaPods, XCFramework, SDK versioning and distribution, C/Swift interoperability, OpenAI APIs, Apple Intelligence

Networking & Data: URLSession, REST, GraphQL, Codable, WebSockets, Alamofire, Core Data, Realm, SQLite, FileManager, file-system management, real-time chat architecture, offline message handling

App Integration & Apple Frameworks: Deep linking, push notifications, UserNotifications, CallKit, Core Location, MapKit, ARKit, AVFoundation, AVPlayer, HLS, Picture-in-Picture, ReplayKit, StoreKit, StoreKit 2, subscriptions

Performance & Testing: Instruments, ARC, memory management and profiling, leak detection, XCTest, XCUITest, unit and UI testing, camera stability, energy optimization

CI/CD & Release: Git, GitHub Actions, automated builds and deployment, App Store Connect, TestFlight, code signing and provisioning

Security & Cloud: Firebase integration, Firebase Analytics, Crashlytics, Remote Config, AWS, Keychain, OAuth2, SSL pinning, biometrics, encryption

Leadership & Process: Technical leadership, mentoring, architecture and solution design, Agile, sprint planning, code reviews, stakeholder communication, interviewing and hiring, AI-assisted development

EDUCATION

Government College University — BS, Computer Science | 2013 – 2017

AVAILABILITY

Available immediately. Open to remote work across time zones, onsite roles in Lahore, and relocation.
